GROUP LAB 2 REPORT

Group # and Student Name(s): **Dylan Shea, Nolan Crane, Yacine Diop, Aiden McKinley**

Worth 50 points **Due Date: See Blackboard**

Though this is a Group Lab 2 Report, you must work this hands-on Lab 2 individually. After **you do that, get in groups, discuss and provide answers to the following problems, and submit this report, one per group, to Blackboard. When you work Lab 2 hands-on, you are likely to do better on Test 3 which will cover the operating systems part of the course.**

You must use this template to submit Group Lab 2 Report.

1. Insert *Lab2_Tree* file from p. 8 of the Lab2 instructions into the space provided or use the *Alt-PrtScr* keys to capture the full screen output (full window) from command *TYPE Lab2_Tree* on p. 8 and paste that window here. One screen capture/shot from any group member will do. Choose the one that you think is closest to the solution, i.e. it contains all the necessary folders and files in them.

```

2. For questions 2.a through 2.j assume that the system prompt displays "C:\>", i.e., your current directory and current drive are the root directory and C drive, respectively. Write a batch file below that will include commands to: (20 points)

   a. Prevent all commands from displaying on the screen. Also, disable command ECHO OFF from displaying.
   b. Display the following message "This is my Lab 2 batch file"
   c. Display the directory hierarchy/structure of the C disk (Do not use DIR)
   d. Display the directory hierarchy/structure of the C disk with all files (Do not use DIR)
   e. Create a subdirectory named *SCORES* in the root directory
   f. Erase subdirectory *SCORES* from the root directory (assume that *SCORES* does not have any files in it)
   g. Copy file *loop.bat* to directory *SCORES*. Assume that file *loop.bat* exists.
   h. Pause the screen
   i. Use the <u>piping</u> operation to pass the output from the DIR command as the input to the SORT command and redirect (route) the output from the SORT command (the sorted directory) to file DirList.
   j. Sort data in the <u>descending</u> order coming from file *Names* and route the output to file *Names_Sorted*. Assume that file *Names* exists.

   The batch file, commands 2.a through 2.j:

   a. @ECHO OFF

   b. REM This is my Lab 2 batch file

   c. TREE

   d. TREE /F

   e. MD SCORES

   f. RD SCORES

   g. COPY loop.bat \SCORES

   h. PAUSE

   i. DIR | SORT > DirList

   j. SORT /R < Names > Names_Sorted

3. Describe step by step what a file named MYSCRIPT does.(20 points)

```
@ECHO OFF
REM STARTING SCRIPT FILE
TREE /F
PAUSE
DIR
PAUSE
MD KATE1 KATE2 KATE3
TREE /F
PAUSE
COPY *.BAT D:\LAB2\KATE2
TREE /F
TREE
PAUSE
CD KATE2
ERASE *.BAT
PAUSE
CD ..
TREE /F
PAUSE
RD KATE1 KATE2 KATE3
TREE /F
PAUSE
REM CLOSING SCRIPT FILE
```

Assumptions: The prompt D:\LAB2> is displayed. D is the current drive and LAB2 is the current directory just below "\" (the root directory).

Command	Description (Fill in)
@ECHO OFF	Stops commands from being displayed, including the ECHO command
REM STARTING SCRIPT FILE	Displays “STARTING SCRIPT FILE”
TREE /F	Shows the directory hierarchy starting with the current directory, including files
PAUSE	Pauses the screen
DIR	Shows the current directory, with date and time each item was last updated
PAUSE	Pauses the screen
MD KATE1 KATE2 KATE3	Creates the KATE1, KATE2, and KATE3 directories
TREE /F	Shows the directory hierarchy starting with the current directory, including files
PAUSE	Pauses the screen
COPY *.BAT D:\LAB2\KATE2	Copies all files with .BAT extension from current directory to KATE2 directory
TREE /F	Shows the directory hierarchy starting with the current directory, including files
TREE	Shows the directory hierarchy starting with the current directory
PAUSE	Pauses the screen
CD KATE2	Changes current directory to KATE2
ERASE *.BAT	Erases .BAT extension files from current directory
PAUSE	Pauses the screen
CD ..	Changes directory to parent directory

TREE /F	Shows the directory hierarchy starting with the current directory, including files
PAUSE	Pauses the screen
RD KATE1 KATE2 KATE3	Removes KATE1, KATE2 & KATE3 directories
TREE /F	Shows the directory hierarchy starting with the current directory, including files
PAUSE	Pauses the screen
REM CLOSING SCRIPT FILE	Displays CLOSING SCRIPT FILE

4. Optional. Briefly describe any issues with the lab. Point me to the specific pages and suggest changes. Thanks.
